Student Testimonial:

“This course has been a major influence in my personal growth both in terms of understanding integrative medicine academically and also using it practically to better my own health. Learning from all the expert speakers in the interactive and experiential classes was fun and enriching. Some of my favorite sessions include Posture, Acupuncture, Tai Chi and Creative Expression and Healing Arts. Most importantly, this class empowered me to take a more active role in my wellness, which is honestly something everyone should do regardless of their career interest, age or professional experience.” - A.L.
